Or call Bose directly see inside back cover for phone numbers. How you go about connecting the Bose 901series equalizer to your stereo system varies slightly depending on whether you intend to use it in a twospeaker or surround sound setup. If youre using earlier 901 speakers, check for possible compatibility issues with the 901series equalizer youre using before you begin. These devices might include tape decks and other equalization or signal processing devices. All jacks are located on the back of the Bose 901 equalizer. Connecting to a switched outlet ensures the equalizer is turned on or off automatically whenever the receiver or amplifier is turned on or off. Play some audio through the system and press the "Tape" or "Tape Monitor" button on your receiver. All sound should stop when this button is pressed. When it does, switch the "Monitor" button on the equalizer to the "Source" position. The audio should start playing again. If it doesnt, check your connections and try again. Consult the documentation that came with the receiver or amplifier for more information about which jacks to use when connecting an equalizer. The 901 Series VI active equalizer must not be used with 901 Series I, II, III or IV speakers. Speaker Accessories Speaker Accessories Bose. Speaker Accessories. The equalizer balances the output of all speaker frequencies to provide natural tonal balance and clarity for an exceptional music experience. It is also quite common that customers throw outUser manuals are also. Speaker Accessories. Try Google Search! Peavey Peavey Delta Blues 115Tweed 30 watt Guitar Amp Peavey Delta Blues 115 Tweed Tube Guitar Amplifier 03327810 Posted by 20200808 235004 please pdf the manual on this amp. Scored a pair of series 3.

I refoamed all 18 drivers bought a EQ on eBay sent it in for recap and upgrade then hooked them up to Pioneer SX 1250. Ha ha heaven. Reviewed Nov 21st, 2018 by Artfrobadoo My buddy has a pair of supposedly original 901s which I have suspicions of being fakes. The wood does not match. There is no labeling. The terminals are crude. He thinks they are the cats meow. So I searched craigslist and I found a pair of 901s for 200 dollars. Then the guy throws in a beautiful working Kenwood KA 7300 amp. I like my Bose 301s better than these 901 VI. Perhaps its the amp I have the associated speakers to what. Reviewed Nov 02nd, 2018 by OzDaddyBear I have 901 series VI and there i a plug between left and right termina, there is nothing in the manual to advise what this is fot. Any ideas! Reviewed Jun 12th, 2018 by Mrsteve I have owned two pair of these. The first pair a series IV, the Second pair a Series VI. I took advantage of the Bose Tradein program some years ago when they still offered it. There are several companies that offer the drivers, and replacing them for both pair is around 560.00Plus the time involved. I need to do a repair on the equalizer. I cannot find the Series III Service Manual. Thanks To be use for PA system or Karaoke. Any suggestion for an appropriate mixer. Im looking for resources to help me troubleshoot and repair the equalizer. I dont have much experience, but I would like to learn, and this seems like a fun project. If anyone is willing to help break things down as simple as is convenient, or could help guide me in this process, I would be very grateful. We all have to start somewhere. I refurbished the speakers myself, and would like to say I did the same to the equalizer. Due to purchasing from a second hand store and not really knowing enough about them I consequently now own two right hand speakers. Not sure how this will affect the speakers.

While it might well be quite possible to fix, I would be more interested in feeding the speakers from another signal source. The cable from the preamp connects to the speakers via a fivepin 180 degrees

DIN plug, and so I think it should be quite possible to connect to some other signal source, the same way I have used a pair of Philips MFB speakers. Am I right or am I right. Anyone have any experience of the 901p active speakers. Or of other Bose Lifestyle 20 substitutes for them No need to attend a live concert anymore. With Two Pair in the proper positions youve got your own live performance! To purchase 901 spares or accessories, please contact the company via their website or visit an authorised retailer. Favor de enviarme manual para conection a mis 901 SPEAKER BOSE.If not Can I use a shelf that is 18 inches distance from the floor. Thanks in advance for your answer You could, but the boundary effect of the speaker being. The sound that comes from the speakers is muffled and crackles loudly. Is this what they sound like when the speaker is toast or is the a fix for this issue. Yes, if you hear I hadnt used them in about a year.the gentlemen that purchased them told me that when he used them he got a crackling. Any Ideas on best possible way The Bose EQ connects to the tape out and tape in on the amplifier or reciever. If. Search Fixya for the dozens of times I have answered this type of question.Bose 901 are speakers. Here is a video to show how a Bose CD tray was repair ed. It might help. Thank you for your patience. The high quality speaker restoration process includes membrane coating, damping of driver housings, proper reinstallation of drivers, 2way speaker checkup single driver and complete spaker and soundproofing of casing. The sound of Thulinn BOSE 901 speakers is truly improved. The surfaces of the speakers have been refurbished. If you have any questions, feel free to ask. I will ship worldwide. Amazon calculates a product's star ratings based on a machine learned model instead of a raw data average. The model takes into account factors including the age of a rating, whether the ratings are from verified purchasers, and factors that establish reviewer trustworthiness. See All Buying Options Add to Wish List Disabling it will result in some disabled or missing features. You can still see all customer reviews for the product. Across the whole spectrum of human hearing, highs and especially lows, are clearly heard through these speakers. Nothing I say about them matters very much, because they must be heard to be believed. Reviewed in the United States on September 27, 2016 Lot of debate on these. Everyones taste are different and usage is different as well.

My perspective is that they are good pa, background speakers for casual listening while doing chores and are infact sweet sounding, meaning they dont kill your ears with brightness or detail certain speakers havewhich maybe more fault of horrible recordings that better systems can reveal so you dont get much listener fatigue from the highs as there is no tweeter and cuts off around 13k,, Definitely has a house sound, But critically listening, sound rather monotone and does not have transparency,sound muffled, and rather veiled. Then, when they heard side by side with even the cheapest speakers I had, castle, monitor audio, kef, etc.they couldnt believe how muffled it sounded by comparison and the shock in the faces told the story. These are not overpriced like the lifestyle systems in terms of material cost to build them. Also, Some people bash it because of paper drivers but paper actually sounds among the mist natural over metal cones, Kevlar, if properly engineered. Used by audio note, scan speak, etc. For me, they. Are not for critical use. They maunely serve as a

tv stand and will probably be used in the garage. However, music and taste is subjective so if it sounds good to you, stick to it. Some audiophile speakers also sound horrible and can be more annoying vid listener fatigue. Please try again later. Friend of my brother, stationed in Korea, during Nam, brought some of these home. Kenwood system. macrame hangers. Im ol school all the way..If your room is large enough, and follow the manual on placement, you should be satisfied. Please try again later. Please try again later. Kployhar 5.0 out of 5 stars That was when I was stationed in Germany in the Army the first time. I could not afford these back then. I bought some Klipsch KG4s which I still have blown horns. So instead of new, I found a guy who was going back to the states and bought his 901 Series Ones from him, and fell in love.

At the time I was powering them with an Onkyo and Technics amps I had bridges for a total of over 500 watts per channel continuous power. They handled it beautifully and would cause the CQ to come to my room almost daily and tell me to turn it down. I used that pair of speakers until 1995 when I got divorced and I sold the whole system to a friend who still rocks it to this day. Same 901s that he refuses to sell back to me. On to this purchase. I decided to buy a new pair, and wanted the black ones to replace a pair of Series V in walnut. So they arrived pretty fast. I paid for one day shipping, but they came in about three over the weekend. Who can complain about that. I unpacked them, spend some time with the tulip stands from the old set and wiring, and then I put the power to them. I run these with an old Bose 1801 amp, a Yamaha Preamp and the Bose EQ. Hey, they brought a new crispness to the music I enjoy. I pushed everything through them. Rocknroll, Country, Jazz, and Classical horns, and everything sounds wonderful. You will read a lot of reviews from folks who do not like these speakers, and you will also talk to people who like Ford, Chevy, and Dodge trucks. Everyone swears theirs is the best. All I can tell you is these sound wonderful if you pay special attention to speaker placement, wiring, and equalizer setup. I am very pleased with the sound, the product and the shipping. For all the people who are not fans of the 901s, probably did not set them up right. My eighteen year old son swore up and down that the new stuff was better. A steak is still a steak, and modern tech cannot improve that. He is now a 901 believer, and not a convert yet but in college he cannot have my old set. I will say to everyone, it is important to have good equipment to drive these and to get them most out of them. Do not hook other speakers up to the equalized system, and pay attention to room placement and you should get great sound from them and tremendous bass.

You too could be a convert. Also I would like to add, your wife will hate the way you have to set these up, and will offer several suggestions as to what you should do with your new speakers, but you can follow my lead and leave with your 901s and never look back. I thought it was cheap way to get out. As a disabled Veteran, it is difficult for me to carry these heavy items to my vehicle, and in my area you cannot even find this product locally. It is nice to have a department store on the web. Thanks again Amazon. So here is my final thought. Buy a set of 901s, kick your complaining wife to the curb, get a hot little girlfriend, and turn up the tunes. Addio! Please try again later. Please try again later. Troy Sprinkles 5.0 out of 5 stars Please try again later. Please try again later. I am happy with how it works. Please try again later. Please try again later. Yolks56 3.0 out of 5 stars Please try again later. Please try again later. Robert Bonner 5.0 out of 5 stars Both my wife and I are big music fans and listen to music more than we watch TV. Or you can do as I do, have two separate speaker systems. I am using an Onkyo 7.2 receiver with the Bose 901s as my stereo only speakers. My surround sound system has a full set of different speakers being used with my Onkyo 7.2 amplifier. My Onkyo receiver has a Zone 2 and a Zone 3 PreAmp outputs. I am also using my Zone 3 Preamp outputs for my Bose 901 and headphones. I love both the surround sound setup and my Bose 901 Stereo setup. I use my Bose 901 for listening to Stereo Jazz, Acoustical Music, Classical Music, etc. They do not do well with hard Rock or music with heavy bass., that was prior to my discovery below. All I can say now is, WOW!!! Of course, what sounds good to me may not sound the same to you. Thats why they sell cars in different colors, so everyone can make their own decisions. Please try again later. Please

try again later. Mike Fraser 1.0 out of 5 stars Please try again later. Please try again later.

Craig 4.0 out of 5 stars Have been listening to my set, bought new in 2013, for three years and always enjoy the experience despite the laughs you get from others.. Heres the bottom line for me they succeed or fail based upon room positioning. You need to get them 8 or more feet apart, equally and at least 18 inches from an unencumbered wall, AND, most importantly, make sure there is unimpaired space on that wall between the two speakers. Once so arranged, the famous 3D soundstage appears and performers appear shockingly realistic. It also helps dramatically if you raise them high enough so that they resonate at your seated ear height. Yes, it is also true that they do not have the crispness of some modern designs say, with AMT drivers and are somewhat less precise than tower speakers because you hear, mostly reflected sound. If you reflect that sound against a very soft surface drapes the result will fail. Speculate that one reason for the extreme reviews these speakers generate has to do with 1 the necessity for correct positioning and 2 the need for a preamp feed to the equalizer. Enough power is also required would suggest 100 watts RMS or more. Pundits ridicule the equalizer but I suggest this would you rather have an EQd, coherent sound or a crossover one that always suffers from tonal compromise. They do sound coherent. Please try again later. Please try again later. The striking cobra 5.0 out of 5 stars Im a music writer and have listened to tens of thousands of records from country to rock to blues to jazz. Its become fashionable lately for socalled audiophiles to bash 901s and even to bash Dr. Bose. The guy was a genius, an MIT engineer and professor who won every award out there for sound. 901s have been used in studios for decades for playback, in auditoriums, in concert halls. No other speaker out there works as well, if they are used correctly. That means correct placement, moving them around and making sure the music is reflected properly.

In a room full of people they cant be beat. Dont listen to the people bashing these, most of them have never owned a pair. Please try again later. Please try again later. Adrian G Wilkins 1.0 out of 5 stars They require use of an equalizer that will only work with certain amplifiers. The Bose recommended list of amplifiers only includes discontinued models. I have called them and they tried to be helpful but could not do much. Because I took too long trying to get them to work right I can now not return them to the vendor WizardElectroland who was basically useless in trying to help me with my problem. Clearly some of this is my fault for taking too long but overall a very bad experience. Please try again later. Please try again later. Something went wrong. View cart for details. More information at returns. My listing includes insured, return shipping only Honest seller. Great communication. He has done great work replacing the capacitors on my Series IV EQ in the past, and is now performing upgrades on this units RCA jacks as well as amp and audio sections. If you havent heard the difference between an aged EQ and one that has been upgraded, I can tell you that

there is a substantial difference in the upgraded systems ability to produce rich and detailed sound. In addition to my Series IV 901s with upgraded EQ, I also have a set of new Series VI.2 901s, and, surprisingly, I honestly cannot tell that there is a great deal of difference between the two. I cannot recommend him any more highly. So make the investment; its way, way worth it! The speakers are 3.75 inches in diameter without a crossover. If you dont use the eq, then you aint got no highs and you aint got no lows so it must be Bose. It is totally the fault of low information listeners some whos confidence level is truly amazing. Bose 901s arent audiophile speakers and they never intended to be. They are fun, loud, small, dynamic and retrocool. Buy a set or two of Series I or Series II speakers and get the eq updated. Awesome! The EQ upgrade made a huge difference in sound quality. My son in college loves them and they will rock the house! I was amazed at how good my bose sounded after Dave finished his work. Great job and would highly recommend to anyone to use Dave. He also called and went over everything with me, and that made the process even more special and put me at ease from start to finish. Great job Dave and Thank you With his repairs and upgrades to my equalizer my 901s are alive again.

I had bought the speakers and equalizer a few months before, refoamed all 18 drivers and thought some of them had blown speaker coils, there was a distortion but could not narrow down which drivers. I sent my equalizer to David. The unit was originally setup for 220volts since it was purchase in Germany in 1980. Whom ever tried to change it over to 110volts mess up, the equalizer board was only getting part of the power needed. After Davids repairs these old speakers sound band new!!! Through a series of clear, timely emails Dave helped me decide on several upgrades. He then completed the work in a timely manner and when it turned out my speakers needed more work NOT related his work he continued his excellent service by advising me how to proceed.
