Where the real disappointment kicked in is when i plugged it in. Im really disappointed with this as I use isolated power blocks on my board and its usually really quiet. The effect of the pedal is ok, but, I feel like it was a waste of money as I find myself going back to my Cs3 which id hoped to use only on my guitar rig instead of my bass rig. Pros. if you get past the hissing sound, it does balance the bass tones Cons. Send report Total handling features sound quality Boss quality and performs well. Firstly, to brighten up the sound of my bass guitar and secondly to keep the overall output levels under control. If you start using this unit your bands sound engineer will be your new best friend. No matter how hard you now play, your output will be under control. The setup is very easy and the manual is very clear. I particularly like the enhancer as it just lifts the overall bass sound produced. I leave the unit on all the time in my pedal board to do its job. It is a fairly simple pedal to get to grips with. It performs pretty well, especially for the price. I found using the enhance function in a very limited fashion is the best way to use it. I would definitely get another one of these. I followed the manual and dialled in the enhancer settings, which made my bass sound really bright, which I don't like. Then I tried the limiter settings and that made my playing sound really dead, which I don't like either all the emotion was drained out of my playing. It's well made, but why? Still worth every penny, smooths out the overall sound so everything sounds more professional. Pretty cool invention. Sorry, we failed to record your vote. Around December 2015 I started getting random volume drops and occasional static and hum until January 2016 I lost almost all my volume. I thought the socket in my bass was loose, but I had the same problem with different basses. After trying different cables, I replaced connectors between all my pedals, I have about 10 pedals plus tuner doing them one at time with no fix. Finally I removed pedals from my signal chain one at a time, When I removed the LMB3 I got my volume back and the static went away. This was my only Boss pedal and it worked well enough when new, I just expected to last much, much longer. I've had really good luck with EHX's gear, but I'll be very shy about buying any more of Boss's equipment again. Sorry, we failed to record your vote. Using a pick with slap setting doesn't sound as good. That's why I got 2 pedals they double shipped, I only asked for 1 but I am pleased with the mistake!! Sorry, we failed to record your vote.
